

# SEE LITTLE FROM AFAR

St. Mary School, Ridgefield

2023-2024

PROJECT UPDATE

Grant Amount: \$836

Project Cost: \$868

75 Students Impacted

Grades 6-8

**PURPOSE:** To enhance student learning about cells and other microorganisms by using a projecting microscope that allows students to see images in higher definition.

**IMPACT:** Being able to see through the objectives clearly has made all the difference in using the class microscopes. The class has looked at how human animal cells and plant cells differ through direct observation as well as organisms in pond water. Students have showed an increased passion for science.

**FUTURE PLANS:** The microscopes will be used in life science classes in future years to come. The hope is to work with the technology coordinator to learn how to use the photo-taking feature of the microscope.
